★ Kawasaki Trike Spider prototype - \$3500 (Granbury Tx)

image 11 of 15

This bike is made from a 97 Kawasaki Zephyr 1100 back in 2000. It won the Houston Autorama in different paint schemes and configurations in 01,03and05. All rights to the design were purchased buy a major bike company as a prototype and test bed to the modern Spyder configuration. I purchased the bike some years ago at an auction and after

motor would run but the boots and carbs were bad. I purchased some carbs but they wound up being wrong and wouldn't fit and again it sat. The motor is solid and I also have the extra motor(also good)that came with it. It is highly unusual and definitely one of a kind. It was professionally built in a super nice chassis. The bike actually leans into the corners like a real bike when turning. It needs to be gone over from head to toe but it is all there.Nice one off glass body. It would be a fun project for anyone who has the time. I am 75yrs old now and I do t see well enough to be on the road anymore, lol. This is probably in everyone's favor. Lol! The bike will need some old wiring cleaned up and some carb boots to adapt the later model carbs to. I have the old original carbs (rough shape) and some good later model carbs that could be adapted with the right boots. It is a project that is not running at the moment because of the carb situation but I can squirt some gas in the cylinders so you can tell that the motor is ok. I just do not have the time,will or eyesight to put it all back together again. Would make a great project for anyone who is into the Spider configuration . You will have to trailer it home to do the work but I can guarantee the main functions of the bike are solid . Just needs s few weekends of tinkering and restoring to have something no one else has. Call Donny
